# The Grading Factor

## *How to classify a coin's condition*

By Arlyn G. Sieber

Grading is one of the most important factors in buying and selling coins as collectibles. Unfortunately, it's also one of the most controversial. Since the early days of coin collecting in the United States, buying through the mail has been a convenient way for collectors to acquire coins. As a result, there has always been a need in numismatics for a concise way to classify the amount of wear on a coin and its condition in general.

### A look back

In September 1888, Dr. George Heath, a physician in Monroe, Mich., published a four-page pamphlet titled *The American Numismatist*. Publication of subsequent issues led to the founding of the American Numismatic Association, and *The Numismatist*, as it's known today, is the association's official journal. Heath's first issues were largely devoted to selling world coins from his collection. There were no formal grades listed with the coins and their prices, but the following statement by Heath indicates that condition was a consideration for early collectors:

"The coins are in above average condition," Heath wrote, "and so confident am I that they will give satisfaction, that I agree to refund the money in any unsatisfactory sales on the return of the coins."

As coin collecting became more popular and *The Numismatist* started accepting paid advertising from others, grading became more formal. The February 1892 issue listed seven "classes" for the condition of coins (from worst to best): mutilated, poor, fair, good, fine, uncirculated, and proof. Through the years, the hobby has struggled with developing a grading system that would be accepted by all and could apply to all coins. The hobby's growth was accompanied by a desire for more

grades, or classifications, to more precisely define a coin's condition. The desire for more precision, however, was at odds with the basic concept of grading: to provide a concise method for classifying a coin's condition.

For example, even the conservatively few classifications of 1892 included fudge factors.

"To give flexibility to this classification," *The Numismatist* said, "such modification of fine, good and fair, as 'extremely,' 'very,' 'almost,' etc., are used to express slight variations from the general condition."

The debate over grading continued for decades in *The Numismatist*. A number of articles and letters prodded the ANA to write grading guidelines and endorse them as the association's official standards. Some submitted specific suggestions for terminology and accompanying standards for each grade. But grading remained a process of "instinct" gained through years of collecting or dealing experience.

A formal grading guide in book form finally appeared in 1958, but it was the work of two individuals rather than the ANA. *A Guide to the Grading of United States Coins* by Martin R. Brown and John W. Dunn was a breakthrough in the great grading debate. Now collectors had a reference that gave them specific guidelines for specific coins and could be studied and restudied at home.

The first editions of Brown and Dunn carried text only, no illustrations. For the fourth edition, in 1964, publication was assumed by Whitman Publishing Co. of Racine, Wis., and line drawings were added to illustrate the text.

The fourth edition listed six principal categories for circulated coins (from worst to best): good, very good, fine, very fine, extremely fine, and about uncirculated. But again, the desire for more precise categories were evidenced. In the book's introduction, Brown and Dunn wrote, "Dealers will sometimes advertise coins that are graded G-VG, VG-F, F-VF, VF-XF. Or the description may be ABT. G. or VG plus, etc. This means that the coin in question more than meets minimum standards for the lower grade but is not quite good enough for the higher grade."

When the fifth edition appeared, in 1969, the "New B & D Grading System" was introduced. The six principal categories for circulated coins were still intact, but variances within those categories were now designated by up to four letters: "A," "B," "C" or "D." For example, an EF-A coin was "almost about uncirculated." An EF-B was "normal extra fine" within the B & D standards. EF-C had a "normal extra fine" obverse, but the reverse was "obviously not as nice as obverse due to poor strike or excessive wear." EF-D had a "normal extra fine" reverse but a problem obverse.

But that wasn't the end. Brown and Dunn further listed 29 problem points that could appear on a coin – from No. 1 for an "edge bump" to No. 29 for "attempted re-engraving outside of the Mint." The number could be followed by the letter "O" or "R" to designate whether the problem appeared on the obverse or reverse and a Roman numeral corresponding to a clock face to designate where the problem appears on the obverse or reverse. For example, a coin described as "VG-B-9-O-X"

would grade “VG-B”; the “9” designated a “single rim nick”; the “O” indicated the nick was on the obverse; and the “X” indicated it appeared at the 10 o’clock position, or upper left, of the obverse.

The authors’ goal was noble – to create the perfect grading system. They again, however, fell victim to the age-old grading-system problem: Precision comes at the expense of brevity. Dealer Kurt Krueger wrote in the January 1976 issue of *The Numismatist*, “Under the new B & D system, the numismatist must contend with a minimum of 43,152 different grading combinations! Accuracy is apparent, but simplicity has been lost.” As a result, the “New B & D Grading System” never caught on in the marketplace.

The 1970s saw two important grading guides make their debut. The first was *Photograde* by James F. Ruddy. As the title implies, Ruddy uses photographs instead of line drawings to show how coins look in the various circulated grades. Simplicity is also a virtue of Ruddy’s book. Only seven circulated grades are listed (about good, good, very good, fine, very fine, extremely fine, and about uncirculated), and the designations stop there.

In 1977, the longtime call for the ANA to issue grading standards was met with the release of *The Official A.N.A. Grading Standards for United States Coins*. Like Brown and Dunn, the first edition of the ANA grading guide used line drawings to illustrate coins in various states of wear. But instead of using adjectival descriptions, the ANA guide adopted a numerical system for designating grades.

The numerical designations were based on a system used by Dr. William H. Sheldon in his book *Early American Cents*, first published in 1949. He used a scale of 1 to 70 to designate the grades of large cents.

“On this scale,” Sheldon wrote, “1 means that the coin is identifiable and not mutilated – no more than that. A 70-coin is one in flawless Mint State, exactly as it left the dies, with perfect mint color and without a blemish or nick.” (Sheldon’s scale also had its pragmatic side. At the time, a No. 2 large cent was worth about twice a No. 1 coin; a No. 4 was worth about twice a No. 2, and so on up the scale.)

With the first edition of its grading guide, the ANA adopted the 70-point scale for grading all U.S. coins. It designated 10 categories of circulated grades: AG-3, G-4, VG-8, F-12, VF-20, VF-30, EF-40, EF-45, AU-50, and AU-55. The third edition, released in 1987, replaced the line drawings with photographs, and another circulated grade was added: AU-58. A fourth edition was released in 1991.

## Grading circulated U.S. coins

Dealers today generally use either the ANA guide or *Photograde* when grading circulated coins for their inventories. (Brown and Dunn is now out of print.) Many local coin shops sell both books. Advertisers in *Numismatic News*, *Coins* magazine, and *Coin Prices* must indicate which standards they are using in grading their coins. If the standards are not listed, they must conform to ANA standards.

Following are some general guidelines, accompanied by photos, for grading

circulated U.S. coins. Grading even circulated pieces can be subjective, particularly when attempting to draw the fine line between, for example, AU-55 and AU-58. Two longtime collectors or dealers can disagree in such a case.

But by studying some combination of the following guidelines, the ANA guide, and Photograde, and by looking at a lot of coins at shops and shows, collectors can gain enough grading knowledge to buy circulated coins confidently from dealers and other collectors. The more you study, the more knowledge and confidence you will gain. When you decide which series of coins you want to collect, focus on the guidelines for that particular series. Read them, reread them, and then refer back to them again and again.

## AU-50

**AU-50 (about uncirculated):** Just a slight trace of wear, result of brief exposure to circulation or light rubbing from mishandling, may be evident on elevated design areas.

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

These imperfections may appear as scratches or dull spots, along with bag marks or edge nicks. At least half of the original mint luster generally is still evident.

# XF-40

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

**XF-40 (extremely fine):** The coin must show only slight evidence of wear on the highest points of the design, particularly in the hair lines of the portrait on the obverse. The same may be said for the eagle's feathers and wreath leaves on the reverse of most U.S. coins. A trace of mint luster may still show in protected areas of the coin's surface.

## VF-20

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

**VF-20 (very fine):** The coin will show light wear at the fine points in the design, though they may remain sharp overall. Although the details may be slightly smoothed, all lettering and major features must remain sharp.

**Indian cent:** All letters in "Liberty" are complete but worn. Headdress shows considerable flatness, with flat spots on the tips of the feathers.

**Lincoln cent:** Hair, cheek, jaw, and bow-tie details will be worn but clearly separated, and wheat stalks on the reverse will be full with no weak spots.

**Buffalo nickel:** High spots on hair braid and cheek will be flat but show some detail, and a full horn will remain on the buffalo.

**Jefferson nickel:** Well over half of the major hair detail will remain, and the pillars on Monticello will remain well defined, with the triangular roof partially visible.

**Mercury dime:** Hair braid will show some detail, and three-quarters of the detail will remain in the feathers. The two diagonal bands on the fasces will show completely but will be worn smooth at the middle, with the vertical lines sharp.

Standing Liberty quarter: Rounded contour of Liberty's right leg will be flattened, as will the high point of the shield.

Washington quarter: There will be considerable wear on the hair curls, with feathers on the right and left of the eagle's breast showing clearly.

Walking Liberty half dollar: All lines of the skirt will show but will be worn on the high points. Over half the feathers on the eagle will show.

Morgan dollar: Two-thirds of the hair lines from the forehead to the ear must show. Ear should be well defined. Feathers on the eagle's breast may be worn smooth.

Barber coins: All seven letters of "Liberty" on the headband must stand out sharply. Head wreath will be well outlined from top to bottom.

## F-12

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

**F-12 (fine):** Coins show evidence of moderate to considerable but generally even wear on all high points, though all elements of the design and lettering remain bold. Where the word "Liberty" appears in a headband, it must be fully visible. On 20th century coins, the rim must be fully raised and sharp.

## VG-8

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

**VG-8 (very good):** The coin will show considerable wear, with most detail points worn nearly smooth. Where the word "Liberty" appears in a headband, at least three letters must show. On 20th century coins, the rim will start to merge with the lettering.

# G-4

*Indian cent*

*Lincoln cent*

*Buffalo nickel*

*Jefferson nickel*

*Mercury dime*

*Standing Liberty quarter*

*Washington quarter*

*Walking Liberty half dollar*

*Morgan dollar*

*Barber coins*

**G-4 (good):** Only the basic design remains distinguishable in outline form, with all points of detail worn smooth. The word "Liberty" has disappeared, and the rims are almost merging with the lettering.

**About good or fair:** The coin will be identifiable by date and mint but otherwise badly worn, with only parts of the lettering showing. Such coins are of value only as fillers in a collection until a better example of the date and mintmark can be obtained. The only exceptions would be rare coins.

Collectors have a variety of grading services from which to choose. This set of Arkansas half dollars that appeared in an *Early American History Auctions* sale used two of the services.

## Grading uncirculated U.S. coins

The subjectivity of grading and the trend toward more classifications becomes more acute when venturing into uncirculated, or mint-state, coins. A minute difference between one or two grade points can mean a difference in value of hundreds or even thousands of dollars. In addition, the standards are more difficult to articulate in writing and illustrate through drawings or photographs. Thus, the possibilities for differences of opinion on one or two grade points increase in uncirculated coins.

Back in Dr. George Heath's day and continuing through the 1960s, a coin was either uncirculated or it wasn't. Little distinction was made between uncirculated coins of varying condition, largely because there was little if any difference in value. When *Numismatic News* introduced its value guide in 1962 (the forerunner of today's *Coin Market* section in the *News*), it listed only one grade of uncirculated for Morgan dollars.

But as collectible coins increased in value and buyers of uncirculated coins became more picky, distinctions within uncirculated grade started to surface. In 1975 *Numismatic News* still listed only one uncirculated grade in *Coin Market*, but added this note: "Uncirculated and proof specimens in especially choice condition will also command proportionately higher premiums than these listed."

The first edition of the ANA guide listed two grades of uncirculated, MS-60 and MS-65, in addition to the theoretical but non-existent MS-70 (a flawless coin). MS-60 was described as "typical uncirculated" and MS-65 as "choice uncirculated." *Numismatic News* adopted both designations for *Coin Market*. In 1981, when the second edition of the ANA grading guide was released, MS-67 and MS-63 were added. In 1985 *Numismatic News* started listing six grades of uncirculated for Morgan dollars: MS-60, MS-63, MS-65, MS-65+, and MS-63 prooflike.

Then in 1986, a new entity appeared that changed the nature of grading and trading uncirculated coins ever since. A group of dealers led by David Hall of Newport Beach, Calif., formed the Professional Coin Grading Service. For a fee, collectors could submit a coin through an authorized PCGS dealer and receive a professional opinion of its grade.

The concept was not new; the ANA had operated an authentication service since 1972 and a grading service since 1979. A collector or dealer could submit a coin directly to the service and receive a certificate giving the service's opinion on authenticity and grade. The grading service was the source of near constant debate among dealers and ANA officials. Dealers charged that ANA graders were too young and inexperienced, and that their grading was inconsistent.

Grading stability was a problem throughout the coin business in the early 1980s, not just with the ANA service. Standards among uncirculated grades would tighten during a bear market and loosen during a bull market. As a result, a coin graded MS-65 in a bull market may have commanded only MS-63 during a bear market.

PCGS created several innovations in the grading business in response to these problems:

1. Coins could be submitted through PCGS-authorized dealers only.
2. Each coin would be graded by at least three members of a panel of "top graders," all prominent dealers in the business. (Since then, however, PCGS does not allow its graders to also deal in coins.)
3. After grading, the coin would be encapsulated in an inert, hard-plastic holder with a serial number and the grade indicated on the holder.
4. PCGS-member dealers pledged to make a market in PCGS-graded coins and honor the grades assigned.
5. In one of the most far-reaching moves, PCGS said it would use all 11 increments of uncirculated on the 70-point numerical scale: MS-60, MS-61, MS-62, MS-63, MS-64, MS-65, MS-66, MS-67, MS-68, MS-69, and MS-70.

The evolution of more uncirculated grades had reached another milestone.

Purists bemoaned the entombment of classic coins in the plastic holders and denounced the 11 uncirculated grades as implausible. Nevertheless, PCGS was an immediate commercial success. The plastic holders were nicknamed "slabs," and dealers couldn't get coins through the system fast enough.

In subsequent years, a number of similar services have appeared. Among them, one of the original PCGS "top graders," John Albanese, left PCGS to found the Numismatic Guaranty Corp (NGC). The ANA grading service succumbed to "slab mania" and introduced its own encapsulated product.

There now are numerous other reputable private third-party grading services. PCGS and NGC are the oldest and remain the leaders. In 1990 the ANA sold its grading service to a private company. It operates under the ANACS acronym.

How should a collector approach the buying and grading of uncirculated coins? Collecting uncirculated coins worth thousands of dollars implies a higher level of

numismatic expertise by the buyer. Those buyers without that level of expertise should cut their teeth on more inexpensive coins, just as today's experienced collectors did. Inexperienced collectors can start toward that level by studying the guidelines for mint-state coins in the ANA grading guide and looking at lots of coins at shows and shops.

Study the condition and eye appeal of a coin and compare it to other coins of the same series. Then compare prices. Do the more expensive coins look better? If so, why? Start to make your own judgments concerning relationships between condition and value.

According to numismatic legend, a collector walked up to a crusty old dealer at a show one time and asked the dealer to grade a coin the collector had with him. The dealer looked at the coin and said, "I grade it a hundred dollars." Such is the bottom line to coin grading.

## Grading U.S. proof coins

Because proof coins are struck by a special process using polished blanks, they receive their own grading designation. A coin does not start out being a proof and then become mint state if it becomes worn. Once a proof coin, always a proof coin.

In the ANA system, proof grades use the same numbers as circulated and uncirculated grades, and the amount of wear on the coin corresponds to those grades. But the number is preceded by the word "proof." For example, Proof-65, Proof-55, Proof-45, and so on. In addition, the ANA says a proof coin with many marks, scratches or other defects should be called an "impaired proof."

## Grading world coins

The state of grading non-U.S. issues is similar to U.S. coin grading before Brown and Dunn. There is no detailed, illustrated guide that covers the enormous scope and variety of world coins; collectors and dealers rely on their experience in the field and knowledge of the marketplace.

The *Standard Catalog of World Coins* gives the following guidelines for grading world coins, which apply to the Canadian and Mexican value listings in this book:

In grading world coins, there are two elements to look for: 1) Overall wear, and 2) loss of design details, such as strands of hair, feathers on eagles, design elements on the coat-of-arms, etc.

The age, rarity or type of a coin should not be a consideration in grading.

Grade each coin by the weaker of the two sides. This method appears to give results most nearly consistent with the American Numismatic Association standards for U.S. coins. Split grades, i.e., F/VF for obverse and reverse, respectively, are normally no more than one grade apart. If the two sides are more than one grade apart, the series of coins probably wears differently on each side and should then be graded by the weaker side alone.

Grade by the amount of overall wear and loss of design detail evident on each side of the coin. On coins with a moderately small design element, which is prone to early wear, grade by that design alone. For example, the 5-ore (KM#554) of Sweden has a crown above the monogram on which the beads on the arches show wear most clearly. So, grade by the crown alone.

For MS-66 grade full mint luster will be present with no visible signs of any wear or handling, even under strong magnification. An above average strike, with obvious and significant eye appeal are needed for assignment of this grade designation.

For MS-65 (Gem Brilliant Uncirculated, GemBU) grade there will be no visible signs of wear or handling, even under a 10-power loop. Full mint luster should be present, but is not a necessity of the grade. No detracting bag or adjustment marks will be present. Sharp rims and bold detail are characteristic of this grade.

For MS-63 (Choice Brilliant Uncirculated, ChoiceBU) grade there will be no visible signs of wear or handling, even under a 10-power loop. Mint luster will be present. Ideally no bag marks will be evident, light adjustment marks may be present.

For MS-60 (Uncirculated, Unc.) grade there will be no visible signs of wear or handling, even under a 10-power loop. Adjustment marks and bag marks may be present.

For AU-50 (Almost Uncirculated, AU) all details will be visible. There will be the slightest of wear only on the highest point of the coin. There will often be half or more of the original mint luster present.

On the XF-40 (Extremely Fine, XF or EF) coin, there will be about 95% of the original detail visible. Or, on a coin with a design with no inner detail to wear down, there will be a light wear over nearly all the coin. If a small design is used as the grading area, about 90% of the original detail will be visible. This latter rule stems from the logic that a smaller amount of detail needs to be present because a small area is being used to grade the whole coin.

The VF-20 (Very Fine, VF) coin will have about 75% of the original detail visible. Or, on a coin with no inner detail, there will be moderate wear over the entire coin. Corners of letters and numbers may be weak. A small grading area will have about 66% of the original detail.

For F-12 (Fine, F), there will be about 50% of the original detail visible. Or, on a coin with no inner detail, there will be fairly heavy wear over all of the coin. Sides of letters will be weak. A coin which has not been cleaned will often appear as dirty or dull. A small amount of the grading area will have just about 50% of the original detail.

On the VG-8 (Very Good, VG) coin, there will be about 25% of the original detail visible. There will be heavy wear on all of the coin.

The G-4 (Good, G) coin's design will be clearly outlined but with substantial wear. Some of the larger detail may be visible. The rim may have a few weak spots of wear.

About good, AG-3: Typically only a silhouette of a large design will be visible. The rim will be worn down into the letters, if any.

# 2

## Introduction to Pricing

This price guide is divided into three basic sections containing listings for the coinage of the United States, Canada and Mexico. Each section is presented in linear fashion from earliest to most recent issues. Divisions have been made by political eras, rulers, issuers, coinage types and other logical criteria. Within those breakdowns a singular sorting method has been applied grouping coins by denomination and date in ascending order.

Please consult the table of contents page to locate specific areas of interest.

### Value listings

Values listed in the following price guide are average retail prices. These are the approximate prices collectors can expect to pay when purchasing coins from dealers. They are not offers to buy or sell. The pricing sections should be considered guides only; actual selling prices will vary.

The values were compiled by Krause Publications' independent staff of market analysts. They derived the values listed by monitoring auction results, business on electronic dealer trading networks, business at major shows, and in consultation with a panel of dealers, collectors, researchers and experts. For rare coins, when only a few specimens of a particular date and mintmark are known, a confirmed transaction may occur only once every several years. In those instances, the most recent auction result is listed.

### Grading

Values are listed for coins in various states of preservation, or grades. Standards used in determining grades for U.S. coins are those set by the American Numismatic Association. See Chapter 1 for more on grading.

### Dates and mintmarks

The dates listed are the individual dates that appear on each coin. The letter that follows the date is the mintmark and indicates where the coin was struck: "C" — Charlotte, N.C. (1838-1861); "CC" — Carson City, Nev. (1870-1893); "D" — Dahlonega, Ga. (1838-1861), and Denver (1906-present); "O" New Orleans (1838-1909); "P" — Philadelphia (1793-present); "S" San Francisco (1854-present); and "W" — West Point, N.Y. (1984-present). U.S. Coins without mintmarks were struck at Philadelphia.

A slash mark in a date indicates an overdate. This means a new date was engraved on a die over an old date. For example, if the date is listed as “1899/8,” an 1898 die had a 9 engraved over the last 8 in the date. Portions of the old numeral are still visible on the coin.

A slash mark in a mintmark listing indicates an overmintmark (example: “1922-P/D”). The same process as above occurred, but this time a new mintmark was engraved over an old.

## Mintages

Quantities minted of each date are indicated, after the date and mint mark, when that information is available. Est. prior to a mintage figure indicates the figure is an estimate or a mintage limit.

## Precious-metal content

Throughout this book precious-metal content is indicated in troy ounces. One troy ounce equals 480 grains, or 31.1035 grams.

## Abbreviations

**AGW.** Actual gold weight.

**APW.** Actual platinum weight.

**ASW.** Actual silver weight.

**BV.** Bullion value. This indicates the coin’s current value is based on the amount of its precious-metal content and the current price for that metal.

**Est.** Indicates the exact mintage is not known and the figure listed is an estimate.

**g.** Grams.

**Inc. above or Inc. below.** Indicates the mintage for the date and mintmark listed is included in the previous or next listing.

**KM#.** Indicates “Krause-Mishler number.” This sequential cataloging numbering system originated with the *Standard Catalog of World Coins* and provides collectors with a means for identifying coins.

**Leg.** Legend.

**Mkt value.** Market value.

## Machin's Mill

**KM# 13** Copper **Note:** Crude, lightweight imitations of the British Halfpenny were struck at Machin's Mill in large quantities bearing the obverse legends: GEORGIVS II REX, GEORGIVS III REX, and GEORGIUS III REX, with the BRITANNIA reverse. There are many different mulings. Plain crosses in the shield of Britannia are noticeable on high grade pieces, unlike common British made imitations, which usually have outlined crosses in the shield. Some Machin's Mill varieties are very rare.

Date	AG3	G4	VG8	F12	VF20	XF40
(1747-1788)	40.00	75.00	145	325	800	2,250

**Note:** Prices are for most common within date ranges.

Examples are dated: 1747, 1771, 1772, 1774, 1775, 1776, 1777, 1778, 1784, 1785, 1786, 1787 and 1788. Other dates may exist

## Head facing right obverse

**KM# 14** Copper, 6.74 g. (1794-95) and 5.44 g. (1795-97), 23.5 mm. **Designer:** Robert Scot (1794) and John Smith Gardner (1795) **Note:** The "lettered edge" varieties have TWO HUNDRED FOR A DOLLAR inscribed around the edge. The "pole" varieties have a pole upon which the cap is hanging, resting on Liberty's shoulder. The "punctuated date" varieties have a comma after the 1 in the date. The 1797 "1 above 1" variety has a second 1 above the 1 in the date.

## Draped Bust Half Cent

## Draped bust right, date at angle below obverse

## Value within thin wreath reverse

**KM# 33** 5.44 g., Copper, 23.5 mm. **Obv. Legend:** LIBERTY **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** Robert Scot **Note:** The wreath on the reverse was redesigned slightly in 1802, resulting in "reverse of 1800" and "reverse of 1802" varieties. The "stems" varieties have stems extending from the wreath above and on both sides of the fraction on the reverse. On the 1804 "crosslet 4" variety, a serif appears at the far right of the crossbar on the 4 in the date. The "spiked chin" variety appears to have a spike extending from Liberty's chin, the result of a damaged die. Varieties of the 1805 strikes are distinguished by the size of the 5 in the date. Varieties of the 1806 strikes are distinguished by the size of the 6 in the date.

## Lincoln Cent

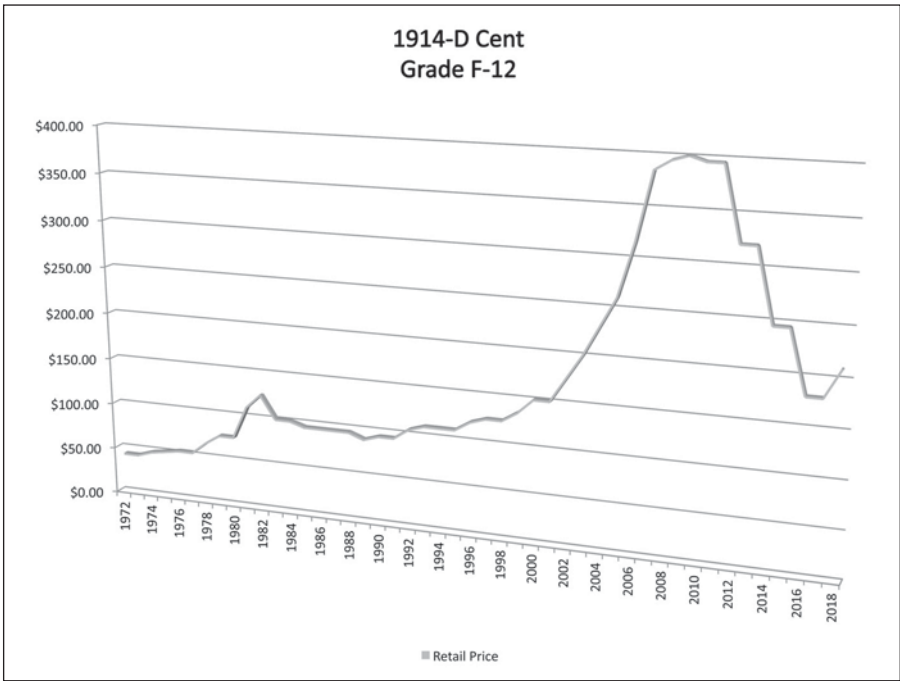

## Wheat Ears reverse

1922 Plain

**KM# 132** 3.11 g., Bronze, 19 mm. **Designer:** Victor D. Brenner **Note:** The 1909 "VDB" varieties have the designer's initials inscribed at the 6 o'clock position on the reverse. The initials were removed until 1918, when they were restored on the obverse • MS60 and MS63 prices are for brown coins and MS65 prices are for coins that are at least 90% original red.

Small date

Large date

Small date

Large date

**KM# 201** 3.11 g., Brass, 19 mm. **Rev. Designer:** Frank Gasparro **Note:** MS60 prices are for brown coins and MS65 prices are for coins that are at least 90% original red. The dates were modified in 1960, 1970 and 1982, resulting in large-date and small-date varieties for those years. The 1972 "doubled die" shows doubling of IN GOD WE TRUST. The 1979-S and 1981-S Type II proofs have a clearer mint mark than the Type I proofs of those years. Some 1982 cents have the predominantly copper composition; others have the predominantly zinc composition. They can be distinguished by weight.

**Seated Liberty Half Dime**

**Seated Liberty, no stars around border, date below obverse**  
**Value within wreath reverse**

**KM# 60** 1.34 g., 0.900 Silver 0.0388 oz. ASW, 15.5 mm. **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** Christian Gobrecht **Note:** A design modification in 1837 resulted in small-date and large-date varieties for that year.

Date	Mintage	G4	VG8	F12	VF20	XF40	AU50	MS60	MS65
1837 small date	Inc. above	45.00	60.00	95.00	155	215	460	625	2,625
1837 large date	Inc. above	45.00	60.00	95.00	155	215	460	525	2,300
18380	70,000	110	165	310	610	1,600	2,550	4,200	23,500

**Seated Liberty, stars around top 1/2 of border, date below obverse**  
**Value within wreath reverse**

**KM# 62.1** 1.34 g., 0.900 Silver 0.0388 oz. ASW, 15.5 mm. **Rev. Legend:** UNITED STATES OF AMERICA  
**Designer:** Christian Gobrecht **Note:** The two varieties of 1838 are distinguished by the size of the stars on the obverse. The 1839-O with reverse of 1838-O was struck from rusted reverse dies. The result is a bumpy surface on this variety's reverse.

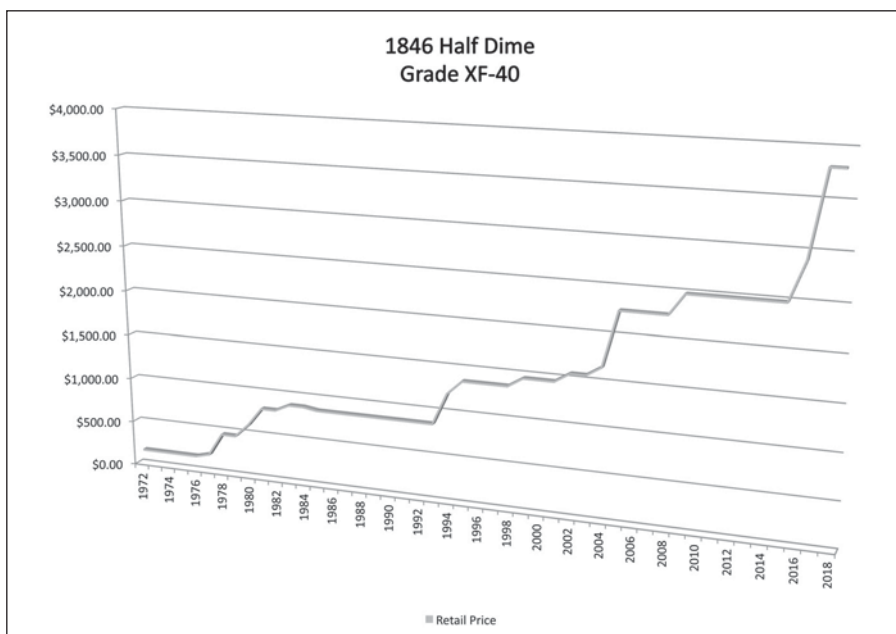

Date	Mintage	G4	VG8	F12	VF20	XF40	AU50	MS60	MS65
1838 large stars	2,255,000	17.00	22.00	26.00	42.00	95.00	190	250	1,250

**American Bison standing on a line reverse**

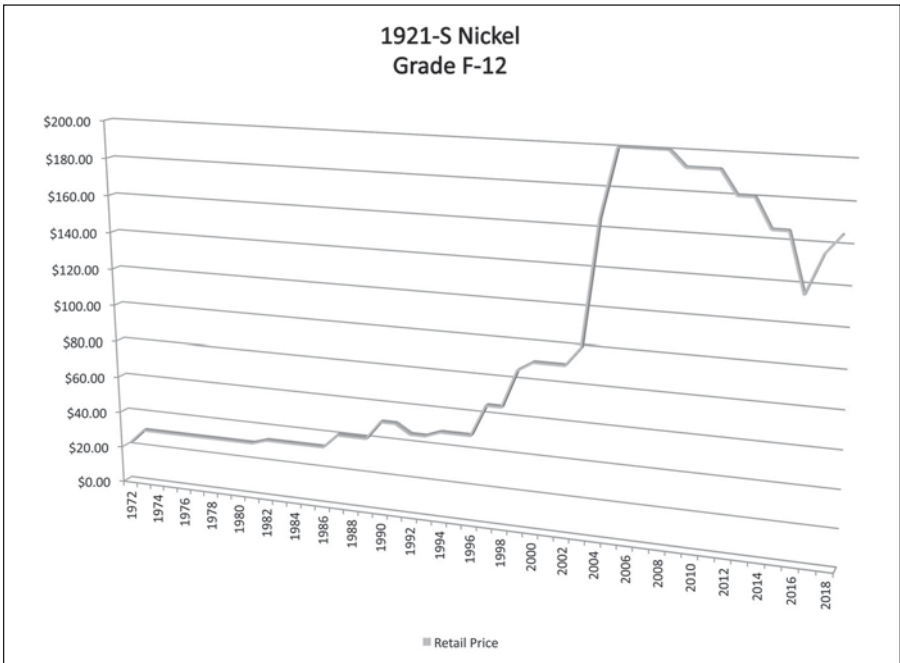

1918/17D

1937D 3-legged

**KM# 134** 5.00 g., Copper-Nickel, 21.2 mm. **Designer:** James Earle Fraser **Note:** In 1913 the reverse design was modified so the ground under the buffalo was represented as a line rather than a mound. On the 1937D 3-legged variety, the buffalo's right front leg is missing, the result of a damaged die.

Mint mark 1968- present      1982 No mint mark

**KM# 195a** 2.27 g., Copper-Nickel Clad Copper, 17.91 mm. **Designer:** John R. Sinnock **Note:** The 1979-S and 1981-S Type II proofs have clearer mint marks than the Type I proofs of those years. On the 1982 no-mint-mark variety, the mint mark was inadvertently left off.

### Capped Bust Half Dollar

Draped bust left, flanked by stars, date at angle below obverse

50 C. below eagle reverse

**KM# 37** 13.48 g., 0.892 Silver 0.3866 oz. ASW, 32.5 mm. **Rev. Legend:** UNITED STATES OF AMERICA  
**Designer:** John Reich **Note:** There are three varieties of the 1807 strikes. Two are distinguished by the size of the stars on the obverse. The third was struck from a reverse die that had a 5 cut over a 2 in the "50C" denomination. Two varieties of the 1811 are distinguished by the size of the 8 in the date. A third has a period between the 8 and second 1 in the date. One variety of the 1817 has a period between the 1 and 7 in the date. Two varieties of the 1820 are distinguished by the size of the date. On the 1823 varieties, the "broken 3" appears to be almost separated in the middle of the 3 in the date; the "patched 3" has the error repaired; the "ugly 3" has portions of its detail missing. The 1827 "curled-2" and "square-2" varieties are distinguished by the numeral's base -- either curled or square. Among the 1828 varieties, "knobbed 2" and "no knob" refers to whether the upper left serif of the digit is rounded. The 1830 varieties are distinguished by the size of the 0 in the date. The four 1834 varieties are distinguished by the sizes of the stars, date and letters in the inscriptions. The 1836 "50/00" variety was struck from a reverse die that has "50" recut over "00" in the denomination.

**Walking Liberty Half Dollar**

**Liberty walking left wearing U.S. flag gown, sunrise at left obverse  
Eagle advancing left reverse**

Obverse mint mark  
1916-1917

Reverse mint mark  
1917-1947

**KM# 142** 12.50 g., 0.900 Silver 0.3617 oz. ASW, 30.6 mm. **Designer:** Adolph A. Weinman **Note:** The mint mark appears on the obverse below the word "Trust" on 1916 and some 1917 issues. Starting with some 1917 issues and continuing through the remainder of the series, the mint mark was changed to the reverse, at about the 8 o'clock position near the rim.

**Draped bust right, flanked by stars, date below obverse Heraldic eagle reverse**

**KM# 32** 26.96 g., 0.892 Silver 0.7732 oz. ASW, 39-40 mm. **Obv. Legend:** LIBERTY **Rev. Legend:** UNITED STATES OF AMERICA **Designer:** Robert Scot **Note:** The 1798 "knob 9" variety has a serif on the lower left of the 9 in the date. The 1798 varieties are distinguished by the number of arrows held by the eagle on the reverse and the number of berries on the olive branch. On the 1798 "high-8" variety, the 8 in the date is higher than the other numerals. The 1799 varieties are distinguished by the number and positioning of the stars on the obverse and by the size of the berries in the olive branch on the reverse. On the 1700 "irregular date" variety, the first 9 in the date is smaller than the other numerals. Some varieties of the 1800 strikes had letters in the legend cut twice into the dies; as between the numerals in the date are wider than other varieties and the 8 is lower than the other numerals. The 1800 "small berries" variety refers to the size of the berries in the olive branch on the reverse. The 1800 "12 arrows" and "10 arrows" varieties refer to the number of arrows held by the eagle. The 1800 "Americai" variety appears to have the faint outline of an "I" after "America" in the reverse legend. The "close" and "wide" varieties of the 1802 refer to the amount of space between the numerals in the date. The 1800 large-3 and small-3 varieties are distinguished by the size of the 3 in the date.

Morgan **Note:** 65DMPL values are for coins grading MS-65 deep-mirror prooflike. The 1878 "8 tail feathers" and "7 tail feathers" varieties are distinguished by the number of feathers in the eagle's tail. On the "reverse of 1878" varieties, the top of the top feather in the arrows held by the eagle is straight across and the eagle's breast is concave. On the "reverse of 1879 varieties," the top feather in the arrows held by the eagle is slanted and the eagle's breast is convex. The 1890-CC "tail-bar" variety has a bar extending from the arrow feathers to the wreath on the reverse, the result of a die gouge. The Pittman Act of 1918 authorized the melting of 270 Million pieces of various dates. They were not individually recorded.

**Designer:** Christian Gobrecht **Note:** Varieties for 1843 are distinguished by the size of the numerals in the date. One 1848 variety has "Cal." inscribed on the reverse, indicating it was made from California gold. The 1873 "closed-3" and "open-3" varieties are distinguished by the amount of space between the upper left and lower left serifs in the 3 in the date.

## MINT SETS

Mint, or uncirculated, sets contain one uncirculated coin of each denomination from each mint produced for circulation that year. Values listed here are only for those sets sold by the U.S. Mint. Sets were not offered in years not listed. In the years the mint did not offer the sets, some private companies compiled and marketed uncirculated sets. Mint sets from 1947 through 1958 contained two examples of each coin mounted in cardboard holders, which caused the coins to tarnish. Beginning in 1959, the sets have been packaged in sealed Pliofilm packets and include only one specimen of each coin struck for that year (both P & D mints). Listings for 1965, 1966 and 1967 are for "special mint sets," which were of higher quality than regular mint sets and were prooflike. They were packaged in plastic cases. The 1970 large-date and small-date varieties are distinguished by the size of the date on the coin. The 1976 three-piece set contains the quarter, half dollar and dollar with the Bicentennial design. The 1971 and 1972 sets do not include a dollar coin; the 1979 set does not include an S-mint-marked dollar. Mint sets issued prior to 1959 were double sets (containing two of each coin) packaged in cardboard with a paper overlay. Original sets will always be toned and can bring large premiums if nicely preserved with good color.

# PROOF SETS

PROOF SETS

Proof coins are produced through a special process involving specially selected, highly polished planchets and dies. They usually receive two strikings from the coin press at increased pressure. The result is a coin with mirrorlike surfaces and, in recent years, a cameo effect on its raised design surfaces. Proof sets have been sold off and on by the U.S. Mint since 1858. Listings here are from what is commonly called the modern era, since 1936. Values for earlier proofs are included in regular-date listings. Sets were not offered in years not listed. Since 1968, proof coins have been produced at the San Francisco Mint; before that they were produced at the Philadelphia Mint. In 1942 the five-cent coin was struck in two compositions. Some proof sets for that year contain only one type (five-coin set); others contain both types. Two types of packaging were used in 1955 -- a box and a flat, plastic holder. The 1960 large-date and small-date sets are distinguished by the size of the date on the cent. Some 1968 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. The 1970 large-date and small-date sets are distinguished by the date on the cent. Some 1970 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. Some 1971 sets are missing the mint mark on the five-cent piece, the result in the preparation of an obverse die. The 1976 three-piece set contains the quarter, half dollar and dollar with the Bicentennial designs. The 1979 and 1981 Type II sets have clearer mint marks than the Type I sets for those years. Some 1983 sets are missing the mint mark on the dime, the result of an error in the preparation of an obverse die. Prestige sets contain the five regular-issue coins plus a commemorative silver dollar from that year. Sets issued prior 1956 came in transparent envelopes stapled together in a small square box. In mid-1955, sets were changed to a flat clear cellophane envelope. In 1968 sets were changed to a hard plastic case as they still are currently issued.

## COMMEMORATIVE COINAGE 1982-PRESENT

All commemorative silver dollar coins of 1982-present have the following specifications: diameter — 38.1 millimeters ; weight — 26.7300 grams; composition — 0.9000 silver, 0.7736 ounces actual silver weight. All commemorative \$5 coins of 1982-present have the following specifications: diameter — 21.6 millimeters; weight — 8.3590 grams; 0.9000 gold, 0.242 ounces actual gold weight.

Note: In 1982, after a hiatus of nearly 30 years, coinage of commemorative half dollars resumed. Those designated with a 'W' were struck at the West Point Mint. Some issues were struck in copper-nickel. Those struck in silver have the same size, weight and composition as the prior commemorative half-dollar series.

## MEXICO

The United States of Mexico, located immediately south of the United States has an area of 759,529 sq. mi. (1,967,183 sq. km.) and an estimated population of 100 million. Capital: Mexico City. The economy is based on agriculture, manufacturing and mining. Oil, cotton, silver, coffee, and shrimp are exported.

Mexico was the site of highly advanced Indian civilizations 1,500 years before conquistador Hernando Cortes conquered the wealthy Aztec empire of Montezuma, 1519-21, and founded a Spanish colony, which lasted for nearly 300 years. During the Spanish period, Mexico, then called New Spain, stretched from Guatemala to the present states of Wyoming and California, its present northern boundary having been established by the secession of Texas during 1836 and the war of 1846-48 with the United States.

Independence from Spain was declared by Father Miguel Hidalgo on Sept. 16, 1810, (Mexican Independence Day) and was achieved by General Agustin de Iturbide in 1821. Iturbide became emperor in 1822 but was deposed when a republic was established a year later. For more than fifty years following the birth of the republic, the political scene of Mexico was characterized by turmoil, which saw two emperors (including the unfortunate Maximilian), several dictators and an average of one new government every nine months passing swiftly from obscurity to oblivion. The land, social, economic and labor reforms promulgated by the Reform Constitution of Feb. 5, 1917 established the basis for sustained economic development and participative democracy that have made Mexico one of the most politically stable countries of modern Latin America.

### SPANISH COLONY COB COINAGE

**WAR OF INDEPENDENCE  
CHIHUAHUA**

The Chihuahua Mint was established by a decree of October 8, 1810 as a temporary mint. Their first coins were cast 8 Reales using Mexico City coins as patterns and obliterating/changing the mint mark and moneyer initials. Two c/m were placed on the obverse - on the left, a T designating receipt by the Royal Trea-

suror, crowned pillars of Hercules on the right with pomegranate beneath, the comptrollers symbol.

In 1814, standard dies were made available, thus machine struck 8 Reales were produced until 1822. Only the one denomination was made at Chihuahua.

Mint mark: CA.

### DURANGO

The Durango mint was authorized as a temporary mint on the same day as the Chihuahua Mint, October 8, 1810. The mint opened in 1811 and made coins of 6 denominations between 1811 and 1822.

Mint mark: D.

Note: Occasionally these are found struck over cast Chihuahua 8 reales and are very rare in general, specimens dated prior to 1816 are rather crudely struck

**GUADALAJARA**

The Guadalajara Mint made its first coins in 1812 and the mint operated until April 30, 1815. It was to reopen in 1818 and continue operations until 1822. It was the only Royalist mint to strike gold coins, both 4 and 8 Escudos. In addition to these it struck the standard 5 denominations in silver.

Mint mark: GA.

## GUANAJUATO

The Guanajuato Mint was authorized December 24, 1812 and started production shortly thereafter; closing for unknown reasons on May 15, 1813. The mint was reopened in April, 1821 by the insurgents, who struck coins of the old royal Spanish design to pay their army, even after independence, well into 1822.

Only the 2 and 8 Reales coins were made.  
 Mint mark: Go.

## SOMBRERETE

(Under Royalist Vargas)

The Sombrerete Mint opened on October 8, 1810 in an area that boasted some of the richest mines in Mexico. The mint operated only until July 16, 1811, only to reopen in 1812 and finally close for good at the end of the year. Mines Administrator Fernando Vargas, was also in charge of the coining, all coins bear his name.

## ZACATECAS

The city of Zacatecas, in a rich mining region has provided silver for the world since mid-1500. On November 14, 1810 a mint began production for the Royalist cause. Zacatecas was the most prolific during the War of Independence. Four of the 5 standard silver denominations

were made here, 4 Reales were not. The first, a local type showing mountains of silver on the coins were made only in 1810 and 1811. Some 1811 coins were made by the Insurgents who took the city on April 15, 1811, later retaken by the Royalists on May 21, 1811. Zacatecas struck the standard Ferdinand VII bust type until 1822.

Mint marks: Z, ZS, Zs

**NUEVA GALICIA**

(Later became Jalisco State)

In early colonial times, Nueva Galicia was an extensive province which substantially combined later provinces of Zacatecas and Jalisco. These are states of Mexico today although the name was revived during the War of Independence. The only issue was 2 Reales of rather enigmatic origin. No decrees or other authorization to strike this coin has yet been located or reported.

## OAXACA

## INSURGENT COINAGE

Oaxaca was the hub of Insurgent activity in the south where coinage started in July 1811 and continued until October 1814. The Oaxaca issues represent episodic strikings, usually under dire circumstances by various individuals. Coins were commonly made of copper due to urgency and were intended to be redeemed at face value in gold or silver once silver was available to the Insurgents. Some were later made in silver, but most appear to be of more recent origin, to satisfy collectors.

## VERACRUZ

In Zongolica, in the province of Veracruz, 2 priests and a lawyer decided to raise an army to fight for independence. Due to isolation from other Insurgent forces, they decided to make their own coins. Records show that they intended to mint coins of 1/2, 1, 2, 4, and 8 Reales, but specimens are extant of only the three higher denominations.

### C.M.S. AND S.C.M.

## MULTIPLE COUNTERMARKS

Many combinations of Royalist and Insurgent countermarks are usually found on the cast copies produced by Chihuahua and Mexico City and on the other crude provisional issues of this period. Struck Mexico City coins were used to make molds for casting necessity issues and countermarked afterwards to show issuing authority. Some were marked again by either both or separate opposing friendly forces to authorize circulation in their areas of occupation. Some countermarks are only obtainable with companion markings.

### 2 REALES

**MEXICO CITY MINT**

Because of the great number of assayers for this mint (Mexico City is a much larger mint than any of the others ) there is much confusion as to which initial stands for which assayer at any one time. Therefore we feel that it would be of no value to list the assayers.

#### DIE VARIETIES

Similar basic designs were utilized by all the Mexican mints, but many variations are noticeable, particularly in the eagle, cactus and sprays.

1835 Durango, 8 Escudos  
Illustration enlarged.

A large winged eagle was portrayed on the earlier coinage of the new republic.

1849 Mexico City, 8 Escudos  
Illustration enlarged.

The later eagle featured undersized wings.

1844 Durango, 8 Escudos  
Illustration enlarged.

The early renditions of the hand held Liberty cap over open book were massive in the gold escudo series.

1864 Durango, 8 Escudos  
Illustration enlarged.

A finer, more petite style was adopted later on in the gold escudo series.

## PROFILE EAGLE COINAGE

The first coins of the Republic were of the distinctive Profile Eagle style, sometimes called the "Hooked Eagle". They were struck in the Mexico City in 1823 in denominations of eight reales and eight escudos. In 1824, they were produced at the Durango and Guanajuato mints in addition to Mexico City. Denominations included the one half, one, two and eight reales. No gold escudos of this design were struck in 1824. In 1825, only the eight reales were struck briefly at the Guanajuato mint.

Note: For a more extensive examination of Profile Eagle Coinage, please refer to Hookneck - El Aguila de Perfil by Clyde Hubbard and David O Harrow.

## 8 ESCUDOS

Type I Obverse/Reverse

NOTE: The cap on the reverse of the curved tail Type I points to the "A" of LIBERTAD.

**KM# 382.1** 27.07 g., 0.875 Gold, 0.7615 oz. AGW  
**Obv:** Profile eagle, snake's tail curved **Rev:** Open

book, hand holding stick with cap, cap points to "A" of LIBERTAD **Obv. Legend:** REPUBLICA MEXICANA **Rev. Legend:** LIBERTAD EN... **Mint:** Mexico City

Date	Mintage	F12	VF20	XF40	MS60
1823Mo JM	—	7,000	10,000	20,000	35,000

Note: American Numismatic Rarities Eliasberg sale 4-05, MS-61 realized \$55,200.

**KM# 382.2** 27.07 g., 0.875 Gold, 0.7615 oz. AGW **Obv:** Profile eagle, snake's tail looped **Rev:** Open book, hand holding stick with cap, cap points to "T" of LIBERTAD **Obv. Legend:** REPUBLICA MEXICANA **Rev. Legend:** LIBERTAD EN... **Mint:** Mexico City

Date	Mintage	F12	VF20	XF40	MS60
1823Mo JM	—	6,000	9,000	18,000	35,000

Note: The quality of the strikes of Type I coins is almost always superior to that of the Type II; Details of the eagle feathers, cactus and lettering on the open book are better on most Type I coins but the Type II coins are scarcer; Type I coins outnumber Type II coins by about two to one

## STATE COINAGE

### 1/16 REAL (MEDIO OCTAVO)

**KM# 316** 4.75 g., Copper, 21mm. **Obv:** Bow, quiver and flag **Rev:** Seated figure, left, cap on pole **Obv. Legend:** DEPARTAMENTO DE JALISCO **Edge:** Oblique reeding **Mint:** Guadalajara

Date	Mintage	G4	VG8	F12	VF20	XF40
1860	—	5.00	12.00	28.00	85.00	—

**KM# 317** 4.75 g., Copper, 21mm. **Obv. Legend:** ESTADO LIBRE DE JALISCO **Edge:** Oblique reeding **Mint:** Guadalajara

Date	Mintage	G4	VG8	F12	VF20	XF40
1861	—	4.00	9.00	20.00	50.00	—

### 1/8 REAL (OCTAVO REAL)

**KM# 320** Copper, **Obv:** Facing eagle, snake in beak, value at lower left **Rev:** Radiant Libertad above date within wreath **Rev. Legend:** LIBERTAD **Edge:** Oblique reeding **Mint:** Durango **Note:** Size varies 17-18mm. Weight varies 2.5-4 g. These pieces were frequently struck over 1/8 Real, dated 1821-23 of Nueva Vizcaya. All known examples struck over these coins are believed to be contemporary counterfeits.

## MEXICO-REVOLUTIONARY AGUASCALIENTES

Agascalientes is a state in central Mexico. Its coin issues, struck by authority of Pancho Villa, represent his deepest penetration into the Mexican heartland. Lack of silver made it necessary to make all denominations in copper.

## CHIHUAHUA

Chihuahua is a northern state of Mexico bordering the U.S. It was the arena that introduced Pancho Villa to the world. Villa, an outlaw, was given a title when asked by Madero to participate in maintaining order during Madero's presidency. After Madero's death in February 1913, Villa became a persuasive leader. Chihuahua was where he made his first coins - the Parral series. The *Army of the North* pesos also came from this state. This coin helped Villa recruit soldiers because of his ability to pay in silver while others were paying in worthless paper money.

## GUERRERO

Guerrero is a state on the southwestern coast of Mexico. It was one of the areas of operation of Zapata and his forces in the south of Mexico. The Zapata forces operated seven different mints in this state. The date ranges were from 1914 to 1917 and denominations from 2 Centavos to 2 Pesos. Some were cast but most were struck and the rarest coin of the group is the Suriana 1915 2 Pesos.

**JALISCO**

Jalisco is a state on the west coast of Mexico. The few coins made for this state show that the *Army of the North* did not restrict their operations to the northern border states. The coins were made in Guadalajara under the watchful eye of General Dieguez, commander of this segment of Villa's forces.

## MEXICO, ESTADO DE

Estado de Mexico is a state in central Mexico that surrounds the Federal District on three sides. The issues by the Zapata forces in this state have two distinctions – the Amecameca pieces are the crudest and the Toluca cardboard piece is the most unusual. General Tenorio authorized the crude incuse Amecameca pieces.

**MORELOS**

Morelos is a state in south central Mexico, adjoining the federal district on the south. It was the headquarters of Emiliano Zapata. His personal quarters were at Tlatizapan in Morelos. The Morelos coins from 2 Centavos to 1 Peso were all copper except one type of 1 Peso in silver. The two operating Zapatista mints in Morelos were Atihuyuan and Tlatizapan.

### OAXACA

Oaxaca is one of the southern states in Mexico. The coins issued in this state represent the most prolific series of the Revolution. Most of the coins bear the portrait of Benito Juarez, have corded or plain edges and were issued by a provisional government in the state. The exceptions are the rectangular 1 and 3 Centavos pieces that begin the series.

**PUEBLA**

A state of central Mexico. Puebla was a state that occasionally saw Zapata forces active within its boundaries. Also active, and an issuer of coins, was the Madero brigade who issued coins with their name two years after Madero's death. The state issue of 2, 5, 10 and 20 Centavos saw limited circulation and recent hoards have been found of some values.

**CHICONCUAUTLA

## SINALOA

A state along the west coast of Mexico. The cast pieces of this state have been attributed to two people - Generals Rafael Buelna and Juan Carrasco. The cap and rays 8 Reales is usually attributed to General Buelna and the rest of the series to Carrasco. Because of their crude nature it is questionable whether separate series or mints can be determined.

## BUELNA / CARRASCO

## CAST COINAGE

Revolutionary

**50 CENTAVOS**

**KM# 766** Cast Silver, 29-31mm. **Obv:** National arms **Rev:** Numeral value within wreath **Note:** Sand molded using regular 50 Centavos, KM#445. Size varies. Weight varies 12.81-14.8g.

Date	Mintage	G4	VG8	F12	VF20
ND(1905-1918)	—	200	300	—	—

**COUNTERMARKED COINAGE**

**Revolutionary**

These are all crude sand cast coins using regular coins to prepare the mold. Prices below give a range for how much of the original coin from which the mold was prepared is visible.

## Your Source for North American Coins

With tens of thousands of individual coin listings, more than 6,500 coin images and updated coin values for the United States, Canada and Mexico, *2019 North American Coins & Prices* is the ultimate single-source reference for coin coverage of North America.

Organized by country, government, denomination and date of issue, this expanding reference remains a clear, detailed and easy-to-use resource for a vast array of highly collected coins. The U.S. section offers listings for early Colonial coins and tokens of the 17th and 18th centuries through Federal issues from 1791 to date. Mexico listings begin in 1701 and flow chronologically through many government changes while Canada's listings begin with its earliest unified coinage in 1858 and continue through their many 21st century commemorative issues.

Inside you'll find:

- Descriptions and photos for coin issues of the United States, Canada and Mexico
- Pricing in the most frequently encountered and significant grades of preservation
- Historical market performance graphs for U.S. coins of note
- A Grading Guide to U.S. and World Coins

For nearly three decades, *North American Coins & Prices* has provided unique, complete and authoritative information. Experience for yourself why this exceptional reference is the best guide of its kind on the market.
